Biosketch

Dr Didier Dewailly is professor of Endocrinology and Reproductive Medicine in the Lille University Hospital, France, where he is head of the Department of Endocrine Gynaecology and Reproductive Medicine at the H pital Jeanne de Flandre, including an IVF unit. He coordinates the teaching of Endocrinology, Medical Gynaecology and Reproductive Medicine for the North-

West area of France. He is redactor-in-chief of Médecine-Thérapeutique/Médecine de la Reproduction which is the journal of the French Reproductive Medicine Society whom he is currently the President. His main fields of interest in Research are currently the female hyperandrogenism (Polycystic Ovary Syndrome (PCOS) and other causes) and the Ovulation Disorders mainly PCOS, hypothalamic amenorrhea, hypogonadotropic hypogonadism and premature ovarian failure. His group's research concentrates currently on the markers of ovarian follicles (mainly the antral follicle count by ultrasonography and the assays of AMH) and their diagnostic use for the main causes of ovulation disorders and on the extra-ovarian actions of AMH.
